Smart Helmet: project description

Smart Helmet is an AI-assisted wearable safety prototype designed to monitor signs of fatigue and dizziness, detect alcohol, and support emergency response. It combines onboard computing, sensors, and machine learning to analyze monitoring data and identify potential safety risks. The project integrates embedded systems and intelligent monitoring into a helmet-based design to support wearer safety. It received a Silver Prize at the Seoul International Invention Fair (SIIF) 2024 in South Korea and the SIBOL invention award, presented by the President of the Philippines.
